Fire Contract Radar

CA / AZ federal fire-alarm & sprinkler ITM briefings + weekly Industry Watch

$149 / 30 days · First **5** founding companies · No setup fee · No auto-renewal

What you get

- Weekday public federal notices relevant to California and Arizona fire-alarm and/or sprinkler **ITM**, each gated **KEEP / REJECT / VERIFY** with source links.
- Kitchen hood is an **optional capability filter** for matching. When a solicitation bundles hood with alarm/sprinkler (example: USP Atwater), we show the **full single-award scope**.
- Weekly **Industry Watch** — up to **6** source-linked items (new technology, commercial openings, operating challenges) with concrete CA/AZ contractor impact. Fewer if nothing useful.
- Customer-specific redirects for engagement analytics (timestamp + issued customer id + item; raw vs estimated-human). Plain-link opt-out available for the same price and guarantee.
- No tracking pixels, no open tracking, no IP storage in application logs, no cookies/fingerprinting for this feature.

Money-back guarantee

- **$149 full refund for any reason** if requested by **day 37**.
- The **30-day period starts with the first briefing after onboarding**, followed by a **7-day refund-request window** (explicit date in welcome note).
- Request by reply on your original customer channel; we initiate within **5 business days** (bank timing varies).
- No proof of use, no call, no bid required. **One introductory refund per company** (related accounts count as one).
- Click activity **never** conditions refund eligibility. Service ends when the refund is processed.

What this is not

No minimum bids or wins. Not legal or engineering advice. Not emergency alerts. Not a comprehensive code/compliance feed. Industry Watch does not invent contracts when SAM yield is thin.

Yield honesty (research sample Nov 8, 2026, America/Chicago)

Latest CA/AZ convenience sample: **0 confident KEEP**, **1 VERIFY** (USP Atwater RFQ 15B61827Q00000002), **1 SDVOSB REJECT** (SAVAHCS Tucson). Historical national rows are training context only—not current CA/AZ volume. This sheet is not a live feed claim.

Link analytics (included)

Notice and industry links may use opaque first-party redirects. Opens are not a reliable metric. Forwarded mail cannot identify the actual person. Edge/provider incidental logs must be checked before go-live; we do not claim a network vendor never processes IPs. Prefer plain official URLs anytime.

Independent pilot product. Not affiliated with SAM.gov, NFPA, UL, NFSA, BOP, VA, or listed manufacturers.
